### DETAILED ACTION

The following is an examiner's statement of reasons for allowance: The declaration filed 1 October 2007 was sufficient in overcoming the deficiencies noted in the final office action of 30 May 2007 and therefore the rejections involving the Ross et al. rejection are withdrawn. Upon further consideration and search by the examiner, the limitation of copper nanowires that are free-standing during deposition was not found in the remaining prior art. The term "free-standing" was interpreted as it was defined and limited by the definition given on page 3 of the instant specification: "the capability of vertically extending from a base or substrate **without support from a template or patterning device**" (emphasis added). Included in this narrow definition, then, are catalyst materials such as that in Liu et al. ("A Novel Method for Preparing Copper Nanorods and Nanowires, *Adv. Mater.*, **2003** 15(3) pp 303-305) because a deposited catalyst supports the growth of carbon nanowires as a patterning device if they grow from the catalyst. Though the free-standing growth limitation was not present in claim 21 and its dependants, the monocrystalline Cu nanowires grown with an organometallic precursor taught over the prior art, the closest prior art being Gao et al. ("Electrochemical synthesis of copper nanowires" *J. Phy. Cons. Matter* **14(2002)** 355-363) which does not use any sort of organometallic source involving copper with its claims, and if further combined with a vapor deposition process using an organometallic copper precursor, the process of Gao et al. would become inoperable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
